RE: Internship Opportunity

To whom it may concern,

I am writing in response to the internship information posted on your organization's webpage. Currently, I am a student at the ESPRIT (School of Engineering and Technologies) for a Master's degree in Electromechanics, and last year I graduated from Technological Studies Higher Institute of Rades with a Bachelor in Mechanical Engineering. Within this program I am focusing my studies on the analyzing, modeling, designing and project management.

I believe that my experiences and my ongoing education make me an excellent candidate for an internship within your company. I have gained professional experience with my previous internships before that allowed me to work with a cross-cultural team, and gain the capacity of creative problem solving.

In addition, a month ago I obtained a CSWA which is a certification provided by the Solidworks Company for my sketching, modeling and assembling skills. I'm always trying to improve my capacities as a future engineer through communicating with professionals within the clubs of my school.

I'm also flexible with the MS office applications as well as AutoCAD.

In addition, i have had 80/120 in the TOEFL Exam last april and a C1 in the TCF exam (French international exam) in the same month too.

Hopefully, my skills, experience, and knowledge will match your needs and expectations for interns. I am really excited about this position and I see myself improving the overall output of the company.

Please feel free to contact me via email or by telephone if you have any questions, or wish to discuss my application. Thank you in advance for your time.

Sincerely,

Brahim Abdelli
