Date of birth: 06/10/1996

Tunis 30/5/2019

Dear Taef team,

when I first met Mr. Bechir the CEO of FabSkill and talked about this promising project of his, I was totally determined that I want to work on it with his team. Therefore, in this letter, I would like to express my sincere interest in applying to the post of artificial intelligence intern.

I graduated from the preparatory school of Manar, and I am currently a fourth-year student at ESPRIT where I am majoring in computer science, and specializing in data science.

I am positive that I'm a good fit for the team thanks to my background, skills, and experience in computer science and artificial intelligence. During the last 2 years, I have worked on multiple projects that included artificial intelligence and data science in order to solve certain problems, such as traffic and accidents in Paris, reducing waste and increasing revenue for restaurants... thus I humbly think that I will excel at this post.

Lastly, I have already worked for the past month at FabSkill as a part-time intern and it was a special experience for me in which I got along with the sweet and kind team and also I found myself in a welcoming atmosphere that made me very comfortable.

thanks for considering my application,
sincerely,
Chihebeddine Ben Brahim.
