Tunis, 10-01-2018

Dear Sir / Madam:

I am very pleased to present you my candidature for an internship within your company. I am Mohamed Walid Sliti, graduate engineer in Telecommunications at the Superior School of Telecommunications of Tunis (Sup'Com); I think my profile might suit you and interest you. I would like to point out that the training I have acquired is one of the most prestigious in our country, both in theory and in practice. During my study career in Sup'Com, I had a varied, consistent knowledge that was consolidated by mini projects that enabled me to improve my potential and to become aware of the practice.

Finally, I would like to draw your attention to the fact that my professional experience is limited, and I am convinced that my dynamism, dedication and spirit of initiative and my desire to work in a team enable me to remedy it.

During my academic career, I carried out several projects in development and programming, others related to IoT (Internet of Things), massive data management and machine learning which enabled me to master my computer skills, as well as my creativity and my command of the programming language (C ++, Java, Html, CSS, Python, Shell (Linux)) also framework like Hadoop and Spark.

The attached curriculum vitae contain the details of my curriculum as well as all the information by which you can reach me.

Having a dynamic, proactive and very rigorous nature, I believe I can put my qualities to use for the different tasks I hope you will trust upon me. I hope that my application interests you.

I will remain available for a possible interview. Best regards.

Sliti Mohamed Walid
