Dear All,

I am really glad that I have the opportunity to apply for this opportunity and I hope that i will selected for the upcoming phases of the process.

I see myself bringing a lot of contribution to this position as I assume both my academic background and my experience gave me some expertise in terms of organizational design, team management but most importantly, customer relationship management (CRM), marketing and communication, and Managing Information System (MIS) especially ERPs systems.

My academic subjects this year where heavily oriented to what I need for this internship ("Consumer Behaviour", "Managing information system", "business computing" and "Organizational Desgin and Change Management").

For my experience, managing now an organization of 120 members with several departments, more than 25 teams and projects is giving me an important overview of how an organization should behave but also my marketing team leader responsible is where I applied all my knowledge as a marketing student and gave me enough expertise that I can use in other positions.

Finally, being part of an International organization, working for 2 months in India but most importantly participating in the MEA exchange development seminar 2017 in Egypt gave me a lot of insights about the international market and the MEA market as the conference was attended by over 500 people from 40 countries from the MEA region and my passion for the region as well as understanding their cultures and traditions will be a great asset for Exo MEA and their strategy to expand in this specific market.

I am sure that I will be the perfect candidate for this position and I hope that I will be selected for it!

Sincerely,

Youssef Ben Ahmed.
